

MI Paste Plus

Can help strengthen your teeth ...

Whitening

Tooth whitening procedures can lead to increased tooth sensitivity once completed.

MI paste can greatly reduce tooth sensitivity by protecting dental nerve endings, forming a buffer against plaque and restoring minerals that keep teeth strong.

Soft Drinks

Fizzy and sports drinks can increase your chances of developing tooth erosion and decay.

MI paste can help prevent tooth damage by strengthening enamel, forming a buffer against plaque and improving the flow of saliva which is the body's natural defence system.

Sensitivity

Tooth sensitivity has many causes, such as cracked or decayed teeth, worn enamel or fillings, exposed roots and gum recession and disease.

MI paste quickly soothes sensitivity by protecting dental nerve endings forming a buffer against plaque and restoring minerals that help to strengthen the teeth.

White Spots

White spots are caused by a mild form of fluorosis, the spots are most visible near the incisal edges of the teeth.

MI paste can help to regenerate the surface of the tooth and improve the appearance of white spot lesions.

Braces

Wearing braces can trap food, causing plaque build up and make it more difficult to keep your teeth clean.

MI paste helps to guard the teeth against plaque and harmful bacteria, strengthens the tooth enamel and helps to prevent white spot lesions from forming. After removing braces MI Paste will help to increase the appearance of the enamel.

Pregnancy

Pregnancy especially if you are nauseated can produce high oral acid levels which can lead to enamel erosion.

MI paste mineralizes dental erosion while pregnant by reducing the high levels of oral acid and improving the pH and mineral levels of saliva that keep teeth healthy.

Dry Mouth

Dry mouth can be caused by many factors, such as aging, medications, disease, chemotherapy and even stress.

MI paste relieves dry mouth by restoring that "normal feeling" of saliva lubrication. It also restores healthy components of saliva such as calcium phosphate which help to keep the teeth safe from decay.

MI Paste Plus

Tooth Mousse with added fluoride

- Restores lost minerals
- Protects teeth from decay and decalcification
- Strengthens tooth enamel
- Reduces sensitivity
- Neutralises acid pH
- Water based, sugar free and made from natural ingredients
- Allows better mineral infusion of calcium, phosphate and fluoride
- Contains 900ppm fluoride ions (0.2% sodium fluoride)
- Superior to fluoride alone
- Increases fluoride uptake into plaque and subsurface enamel
- Depresses demineralisation

“Vitamins” For Your Teeth

- do you wear braces?
- do you whiten your teeth?
- are you undergoing chemotherapy?
- are you pregnant?
- are you often under stress?
- do you drink soft or alcoholic drinks?
- is your mouth dry?
- do you have white spots?
- do you suffer from erosion?
- are your teeth sensitive?
